

Homework 2

Objective: To read the book An Introduction to Statistical Learning – with Application in R, available in PDF format. To prepare for class discussions.

- 1) Read chapter 2 (only the topics presented in class). Specifically, do:
 - a. Identify at least three questions that you may have after reading the chapter. These questions should arise from a lack of understanding of what was described in the paragraph, examples, graphs, etc.
 - b. Identify at least three points discussed/presented in the book (in a paragraph, in the examples, or in the graphs, etc.) that you consider important for other colleagues to know.
- 2) Read chapter 3 (only the topics presented in class). Specifically, do:
 - a. Identify at least three questions that you may have after reading the chapter. These questions should arise from a lack of understanding of what was described in the paragraph, examples, graphs, etc.
 - b. Identify at least three points discussed/presented in the book (in a paragraph, in the examples, or in the graphs, etc.) that you consider important for other colleagues to know.

Delivery deadline: the week following the holiday. You will have to respond to an electronic file (E.g., Word) and return it to peterelli@ufv.br. Your filename should be stated as follows: WH2_your_first_name.docx. The same filename should be the subject of your email to me, with the file attached.
